## **About Us**

Karthick Associates, formed in the year 2002, we are a team of professional Structural Engineers supported by qualified technical and assistant staff, with extensive knowledge of relevant building codes, design standards, and practices related to foundations and superstructures.

We strive for perfection and are committed to providing safe, efficient, and economical structural designs. We undertake structural stability assessment and consultancy services for various industrial structures such as cement chimneys, gantry cranes, industrial buildings, and other specialized structures.

We are proud to state that our prompt, sincere, and professional services have earned the confidence and trust of our clients, many of whom continue to retain us as their structural consultants.

*40+ Years of Experience  
in the Industry*

## Our Services

Structural Design

Structural Audit & Assessment

Structural Stability Certification

Repair, Rehabilitation & Strengthening Consultancy

Construction Quality Check Consultancy

Project Management Consultancy

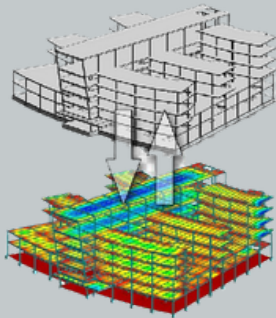

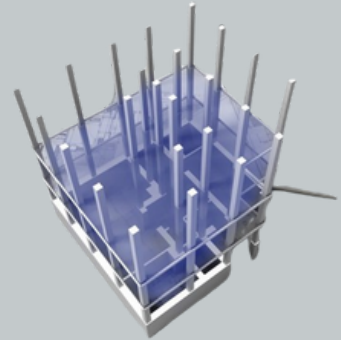

Building & Land Valuation

Technical Advisory for Construction Issues

### Structural Design:

*Our structural design team supports and provides design services as a complete package for enhanced coordination and execution of projects. Our combined years of expertise in this field has enabled us to provide efficient and sound design solutions for projects of varied typologies, backgrounds and difficulties.*

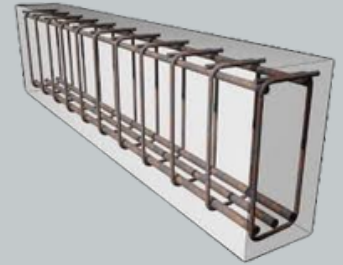

### Structural Stability Assessment & Certification:

*Our team of engineers will be visiting the site, thoroughly inspect and examine the structure as per standards, complete the required calculations and make the assessment accordingly. A stability certificate will be provided at the end of the assessment based upon the condition of the structure.*

### **Repair, Rehabilitation & Structural Strengthening:**

We provide an expert service for repairs, strengthening and seismic retrofitting of RCC structures, using advanced materials and techniques. The entire process can be entrusted with our group of experienced engineers who will make sure the project is carried out with utmost care and responsibility.

### **Land & Building Valuation:**

A land and building valuation report estimates a property's fair market value by combining the land value (based on location, size, and market sales) with the depreciated value of the building structure. It incorporates detailed physical inspection, land area verification, and legal document review to determine the total worth for purposes like mortgages, taxes, or sales.
